## Hp Elitepad 1000 G2 12364077 For Mac

We have a handful of ElitePad 1000 G2 tablets running a mix of Windows 8 1 and Windows 10.. They don't detect any wireless networks when this happens, not just our own, so I know it isn't an issue with our WiFi.. I get complaints from the users that the wifi is dying randomly, and it occurs on all the tablets.
